Teja Naidu Chintha

Data Scientist | Plano, TX (Open to Relocation) | 812-822-7070 | ch.tejanaidu23@gmail.com | linkedin.com/in/tejanaiduc/

Professional Summary

Data Scientist with 4 years of experience building ML models and data pipelines across finance and healthcare. Skilled in fraud detection, forecasting, NLP, and scalable model deployment using Python, Spark, and TensorFlow. Cloud-certified (AWS, Azure, GCP) with a published research record and proven impact in improving accuracy, reducing risk, and driving actionable insights.

Core Skills and Certifications

Languages: Python, Java, JavaScript, Scala, SQL, NoSQL
Machine Learning & AI: Regression, Forecasting, Clustering, Anomaly Detection, Neural Networks, NLP, TensorFlow, PyTorch, Scikit-learn
LLM & GenAI: Hugging Face Transformers, LangChain, LangGraph, SciBERT, TAPAS, CLIP, BGE-M3, Prompt Engineering, Data Structures
Vector Search & Retrieval: FAISS, Vector Embeddings, Elasticsearch, Git, Dense Retrieval, Data modeling, Databricks, Statistics, NLP
Data Science & Processing: Apache Spark, Pyspark, SciPy, Prophet, XGBoost, TensorFlow, Sklearn, Snowflake, Explainability (SHAP)
Cloud & MLOps: AWS (SageMaker, Glue, S3, EMR), MLflow, Airflow, Great Expectations, Kubernetes, CI/CD Pipelines, Delta Lake
Data Visualization & Communication: Power BI, Tableau, Streamlit, Excel (Advanced), R, Git, Cassandra, Solr, VBA, DevOps
Certifications: AWS Certified Solutions Architect – Associate (2024), Google Data Analytics (2022), Alteryx Designer Core & Advanced (2025)

Professional Experience

U.S. Bank — Dallas, TX
Data Scientist — *Oct 2024 – Sept 2025*

- Improved fraud detection accuracy by **20%**, reducing financial losses, by developing anomaly detection and risk-scoring models on 50TB+ transaction datasets using Python and SQL.
- Reduced ETL runtime by **35%** by optimizing Spark/Scala pipelines and orchestrating workflows with Airflow, accelerating model deployment.
- Cut compliance reporting from weeks to days by automating pipelines and building PowerBI dashboards, enabling faster risk and audit.
- Mentored junior analysts in Python and Spark feature engineering techniques, raising team productivity and adopting best practices.
- Partnered with product and risk teams to translate model outputs into **15% faster decision-making**, improving fraud investigation workflows.

Heartland Community Network — Remote
Data Scientist / Data Science Engineer II — *Jul 2023 – Sept 2024*

- Improved healthcare forecast accuracy by **18%** by developing predictive models and NLP pipelines in TensorFlow and scikit-learn, integrated into ETL workflows for production use.
- Reduced manual validation efforts by **40%** by automating reconciliation pipelines in Alteryx and orchestrating end-to-end workflows using **Kubernetes, CI/CD pipelines, and Azure Data Factory**.
- Delivered real-time dashboards in Power BI by streaming model outputs from **on-prem and Azure** environments, enabling faster decision-making for public health stakeholders.
- Mentored junior engineers on best practices for ETL, CI/CD deployment, and integrating ML models into scalable data pipelines.

Cognizant (Client: TD Bank) — Remote
Data Analyst — *Jan 2021 – Jul 2022*

- Improved customer retention insights by applying **clustering and segmentation models**, building strategies for business teams.
- Accelerated reporting by **40%** by creating ML-ready features in SQL/Python, reducing data prep bottlenecks for analysts.
- Enhanced compliance monitoring by building Power BI dashboards with **statistical summaries and anomaly detection**, improving oversight.
- Reduced compliance reporting latency by **25%** by designing automated ETL pipelines and integrating outputs into executive reports.

Projects & Publications

Fraud Detection System — Interactive Dashboard

- Improved fraud detection ROC-AUC from **0.61 - 0.99** and PR-AUC from **0.82 - 0.94** by combining XGBoost with GRU RNNs on 50M records.
- Engineered velocity windows and "impossible travel" geo-distance features, transforming raw transactions into **sequence-aware data**.
- Delivered insights via an **interactive Power BI dashboard**, reducing false positives and enabling earlier fraud detection.

Multimodal Document Intelligence for Compliance (GenAI)

- Reduced manual compliance document review time by **60%** by developing a multimodal assistant leveraging **TAPAS** for table QA, **SciBERT** for contract analysis, and **CLIP** for image/logo verification.
- Increased anomaly detection accuracy by **30%** by orchestrating retrieval and reasoning workflows with **LangGraph** and **BGE-M3 embeddings**, enabling context-aware fraud checks.
- Ensured audit-ready structured outputs by integrating **Guardrails** to enforce consistency (currency formats, non-hallucinated values), strengthening trust and adoption by compliance teams.

End-to-End Crop Yield Prediction — Published in ScienceDirect

- Achieved significant uplift in crop yield forecast accuracy by applying regression and ensemble ML models (Random Forest, Gradient Boosting, XGBoost) on weather, soil, and satellite NDVI data.
- Publication received **100+ citations**, highlighting impact across academia and industry, and provided an interactive dashboard for agronomists to explore model outputs.

Education

Indiana University Bloomington — Bloomington, IN
Masters in Data Science — *May 2024*

SRM University — Chennai, India
Bachelors in Computer Science — *May 2021*
